(See over)

Notes:-

The figures given in parentheses (see columns for January, March, and December) refer to snow hoarfrost &c., the depositions of which in the large gauge are not fully melted until the final thaw, so that the daily distribution is not known, but is calculated from the total amount of the period in the large gauge, according to the daily distribution in the 8 inch gauge, the depositions in which are melted and measured daily.

Explanation relating to the amount ·417 inch bracketted from March 9th to 11th – On the night of the 9th there was a very drifting snowstorm, and on the 10th & 11th there were also drifting snow-showers, and there is no doubt that much was blown out of the gauges. From measurements in various fields it was concluded that there were upon the whole about 5 inches of snow = ·417 inch rain, which amount is accordingly entered. In calculating the number of days during the month on which ·01 or more fell, each of the 3 days has been reckoned as rainy.

ED BW

REGISTER OF RAINFALL IN 1898.

Kept at The Grange, St. Albans *by* John Hopkinson

Latitude ....

Time of Observation ...9 a.m.

Longitude ....

Receiver of Rain Gauge:
- Diameter ...5 ins....
- Height above Ground...1 ft.
- Above Sea Level...280 ft.

Condensed Instructions.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. When snow is not melted at the proper time for measuring, melt what is caught in the funnel by adding to the snow a previously ascertained quantity of warm water, and then deducting this quantity from the total measurement, enter the residue as rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Observers will oblige by sending either a copy of this Register, or even the monthly totals, to Mr. G. J. Symons, of 62, Camden Square, London, N.W. for insertion in his annual tables of *British Rainfall*, which now contain returns from more than 1500 stations.
Additional copies of this form (price 3d. each) can be obtained of the above, from Mr. Stanford, 6 & 7, *Charing Cross, and from all the leading opticians*

Exd J.M.P.

REGISTER OF RAINFALL IN 1900.

Kept at St. Albans in the County of Hertford by John Hopkinson & the County Museum caretaker for him.

Latitude 51° 45' 14" N. (Jan. & Feb. 51° 45' 9")

Time of Observation 9 a.m.

Longitude 0° 19' 56" W. (0° 20' 7")

Height of Receiver of Rain Gauge. Above Ground 1 ft. Above Sea Level 386 ft. (Jan. & Feb. 380 ft.)

Condensed Instructions.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow and enter that as the yield of water—*e.g.*, 3 inches snow = ·25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Date.	Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Date.

Accurate observers of rainfall will oblige by sending a copy of their record to Mr. G. J. Symons, of 62, Camden Square, London, N.W., for insertion in his annual tables of *British Rainfall*, which now contain returns from more than 1500 stations.

Additional Copies of this form (price 3d. each) can be obtained of the above, from Mr. Stanford, 55, *Charing Cross, and from all the leading opticians.*

March 15

Dear Sir,

I am sorry to trouble you again about my return of Rainfall - you wrote to me about a mistake in Jany. suggesting that it should be 2.84, instead of 2.74 in which I thought you were right - I wrote to Mr. Hopkinson to whom I had also made a Return, and have just

heard from him. He makes
the amount 2.74. and on
looking further into the
matter I think that the
mistake is not in the addition
but in the return for Jan 30.
will you please look at
that day. In my return
to Mr. Hopkinson I gave
it as .04 - which I find
is correct. In my return
to you I think I must have
given it as .14 - Might I
ask you to let me have a
Form for the Returns instead
of sending it to me at the
end of the year. It is easier
to make it out each month
than to have to make it out
for the 12 months.

I must apologize for the
trouble I have given you

I remain

Yrs faithfully

John Hale
